GridArray

Specialist AI & Software Delivery Partner

Company Overview

GridArray is an EU-based software consultancy providing specialist AI and full-stack engineering support to enterprise teams and prime contractors delivering complex digital systems.

We operate as a **delivery-focused subcontractor**, contributing scoped technical work packages and embedded engineering expertise within established governance and delivery frameworks.

Core Capabilities

AI Feature & Model Integration

- LLM-powered features (search, summarization, assistants, automation)
- API-based model integration and orchestration
- Prompt engineering, evaluation, and optimization
- Production hardening, monitoring, and performance tuning

Full-Stack & Platform Engineering

- High-quality Frontend development services
- Highly secure backend and API services development
- Platform refactoring and modernization
- Performance, scalability, and reliability improvements

Technical Discovery & Delivery Support

- Architecture input for bids and proposals
- Proofs-of-concept and spike solutions
- Technical feasibility and delivery planning
- Documentation and handover artifacts

Delivery Model

GridArray operates exclusively as a **specialist subcontractor**, not as a competing prime.

Engagement models include:

- Embedded specialist engineering support
- Time-boxed delivery slices
- Scoped technical work packages
- Early-phase and bid-support technical input

Relevant Experience

International Enterprise Delivery (via Andela)

- Embedded in distributed, multi-timezone teams
- Contribution to production systems and customer-facing features
- Operation under established SDLCs and delivery governance
- Exposure to enterprise security and compliance environments

Leadership & Accountability

Founder-Led Delivery

- Direct technical accountability
- Senior AI and full-stack engineering experience
- Hands-on involvement in all engagements
- EU-based, with US and EU collaboration experience

Process & Quality

1. Discovery & scope alignment
2. Embedded delivery within agreed workflows
3. Review, validation, and quality assurance
4. Documentation, knowledge transfer, and handover

Compliance Context

- EU-based operations
- GDPR-aware delivery practices
- Experience within enterprise security and compliance frameworks
- Documentation and handover provided as standard

Engagement & Contact

Primary Use Case:
Specialist subcontractor support for enterprise and public-sector digital programs.
